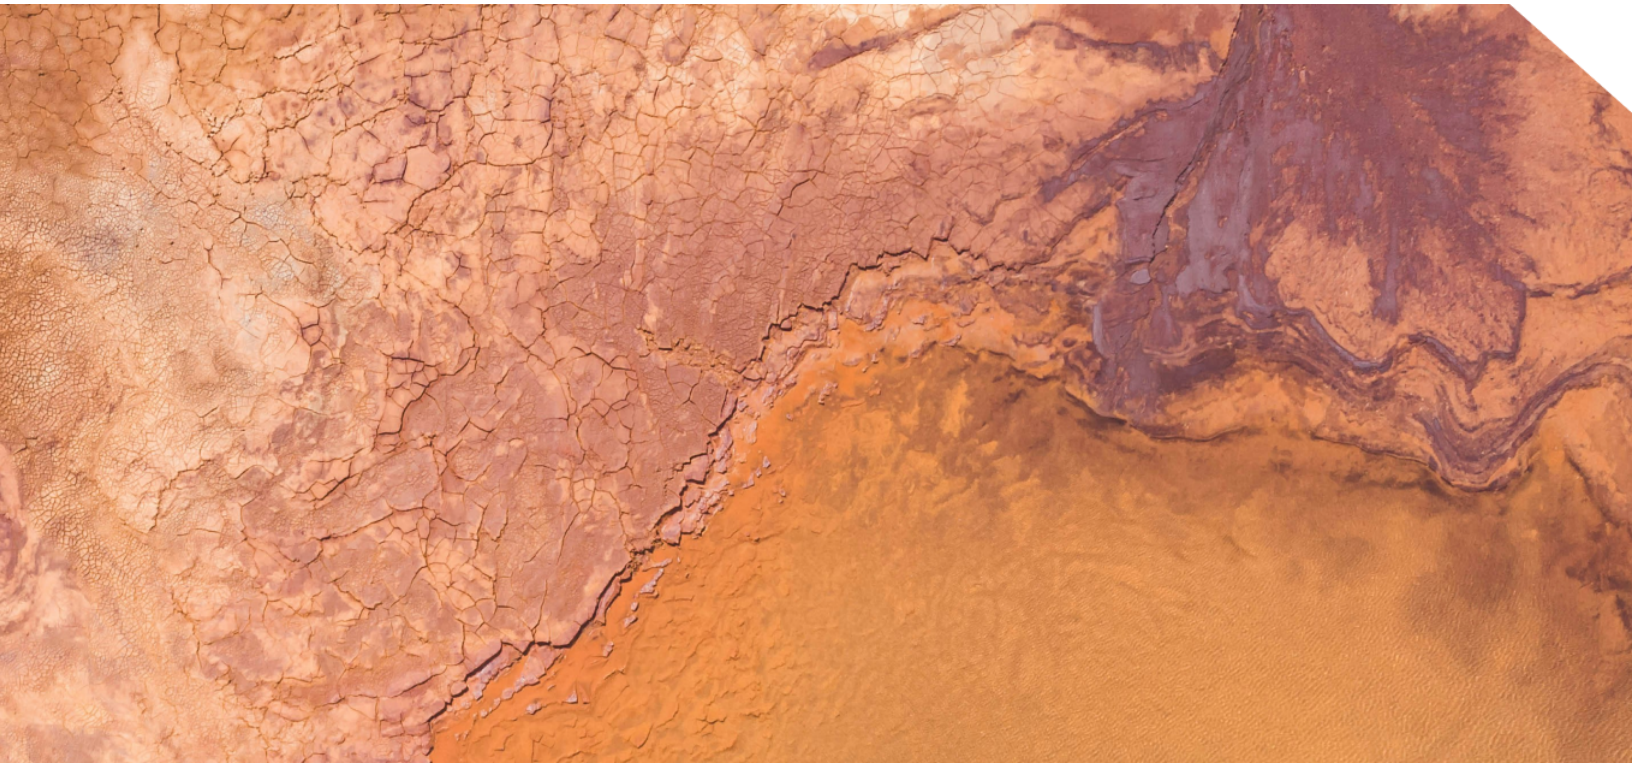
NTH CYCLE

Nth Cycle Quarterly Investor Report

2025 Q4



Letter from the CEO

Dear Nth Investors,

In Q4 2025, our priorities were clear: prepare the company for our next fundraise, advance our anchor projects in the U.S. and the Netherlands with tangible commercial progress, and materially expand our government affairs presence to match the scale of the opportunity in domestic critical minerals.

Fundraising strategy

Our fundraising strategy is intentionally three-pronged to try and move as quickly as possible and take advantage of the momentum here in the US:

- **Strategic Partnerships:** engaging strategic partners in US, South Korea, and Japan as part of active or pending Trade Framework Agreements.
- **Series C:** kicking off Series C, Targeting $50M.
- **US Government:** Seeking a major deal with the US Government (DoC / DoW). We have asked for up to $500M.

Advancing Black Mass Anchor Projects and Other Strategic Minerals

We made progress on both anchor projects in Q4:

- **U.S. anchor project:** We continued to sharpen our path to our next commercial black mass refining facility, including diligence on site and infrastructure requirements and active commercial work to lock in feedstock and offtake.
- **Netherlands anchor project:** We accepted the $7.5M NL Grant, catalyzing our development of this project. At the end of Q4 we began ramping up site selection, plant engineering planning, and securing supply and offtake agreements.
- **Rare earth and Copper Development:** DOE approved our accelerated spend of an existing $3M grant to scale our other metal systems to commercial scale within the next 12 months to broaden our market offering and showcase the platform technology to investors. In Q4 we significantly increased the volume of companies we're engaging with on our rare earth and copper solutions and in discussions around JDAs with a few on the rare earth front.

Government Affairs

In Q4, we completed our transition from Boundary Stone to Mission Strategies and J.A. Green & Company. Following this shift, we significantly increased our government affairs activity and senior-level engagement. We have been actively engaging senior officials at the White House, Department of Commerce, Department of Energy. Specifically we met with:

- **David Copley** | Senior Director of the National Security Council, White House
- **Josh Kroon** | Deputy Assistant Secretary (DAS) for Textiles, Consumer Goods, Materials, Critical Minerals & Metals, Commerce
- **Assistant Secretary Andrea Robertson** | Assistant Secretary of Energy, Office of Critical Minerals and Energy Innovation (CMEI), DoE

CONFIDENTIAL

We also kicked off our engagement with U.S. Embassies in South Korea, Japan, and Saudi Arabia.

Looking ahead

Nth Cycle's mission is to strengthen domestic supply chains for critical minerals through differentiated technology and rapid expansion. Q4 was about setting our foundation to enable our accelerated fundraising, commercial and engineering activities in 2026.

Thank you for your continued confidence in our vision and team.

Megan O'Connor, Founder & CEO, Nth Cycle

I. MARKET CONDITIONS AND GOVERNMENT SUPPORT

MARKET TAILWINDS

Commodity price recovery in Q4 2025 strengthened black mass economics, with lithium carbonate up roughly 50% year-to-date to around 17,000/t, nickel at approximately 16,500/t exiting the year (now closer to 18,000/t in January), and cobalt at about 55,000/t. This rebound, particularly in lithium, reinforces the value of our hydrometallurgical flowsheet, which is specifically optimized for high-efficiency lithium, nickel, and cobalt recovery from black mass.

At the same time, rising MHP payabilities are signaling strong downstream demand for recycled intermediates, indirectly supporting black mass demand and further validating recycling-based supply chains. Against this market backdrop, the structural lack of domestic refining capacity, combined with the U.S. Government's continued focus on onshoring critical mineral recovery, provides a durable policy tailwind for our multi-metal refining platform.

MARKET HEADWINDS

Upstream scrap feedstock uncertainty remains elevated as OEM project cancellations, delayed gigafactory ramp-ups, and shifting cell chemistries continue to limit visibility on future scrap volumes. These dynamics complicate long-term feedstock contracting for shredders and recyclers, introducing risk into supply planning and pricing models across the value chain.

At the same time, tight feedstock supply has pushed black mass payabilities higher as competition intensifies for limited gigafactory scrap and end-of-life material. This trend, compounded by Asian refiners operating below capacity, has pressured short-term refining margins for smaller facilities.

China continues to shape pricing and trade dynamics across the sector, with Chinese buyers and processors exerting upward pressure on black mass prices and maintaining their influence over global commodity markets—contributing to ongoing volatility for non-Chinese refiners.

U.S. FEDERAL CRITICAL MINERAL POLICY AND FUNDING UPDATE

In Q4 2025, the U.S. government advanced several major initiatives aimed at strengthening domestic control over critical mineral supply chains. The administration signaled its significant focus by securing substantial equity positions in strategically important North American projects[1] to reduce reliance on foreign and rival producers.

Meanwhile, the Department of Energy's Critical Minerals Office announced up to $134 million in funding opportunities to enhance rare earth element processing and separation capabilities. After reviewing the opportunity, we determined our technology did not align with the program's scope and elected to defer application, instead awaiting the forthcoming Notice of Funding Opportunity under the Battery Materials Processing and Battery Manufacturing and Recycling Grant Program, first previewed in August 2025.

[1] Vulcan Elements, Trilogy Metals Inc. (Trilogy) and Lithium Americas Corp)

CONFIDENTIAL

Internationally, the U.S. strengthened cooperative frameworks with allied nations such as Australia, emphasizing joint project selection, co-financing mechanisms, and alignment of long-term strategies spanning mining through refining. Trade policy activity also progressed with the ongoing Section 232 investigation into processed critical minerals. This continues to drive uncertainty around potential tariffs on lithium, rare earths, and other key materials.

In November, the Department of the Interior finalized the updated 2025 Critical Minerals List, expanding it from 50 to 60 materials to include copper, silver, boron, uranium, and others—underscoring a growing recognition that a broader range of inputs is central to U.S. economic and national security.

GOVERNMENT RELATIONS ACTIVITY

In Q4, we continued our engagement with key administration and Hill personnel to advocate for additional federal funding and policy support. Meetings included:

- White House – National Security Council and Vice President's Office of Policy
- Dept of Commerce – International Trade Administration
- Dept of Energy – Office of Critical Minerals and Energy Innovation (CMEI)
- Senate Energy and Natural Resources
- Congressman Bob Latta (R-OH-05)[2]

GOVERNMENT RELATIONS SUPPORT

In Q3, Nth Cycle has transitioned from Boundary Stone Partners to working with Mission Strategies to support our government relations engagements. This shift yielded a significant increase in the seniority of meetings we were able to secure in Q4. Key Q4 meetings included:

- **David Copley** | Senior Director of the National Security Council
- **Josh Kroon** | Deputy Assistant Secretary (DAS) for Textiles, Consumer Goods, Materials, Critical Minerals & Metals at Commerce
- **Assistant Secretary Andrea Robertson** | Assistant Secretary of Energy, Office of Critical Minerals and Energy Innovation (CMEI)

II. PEOPLE UPDATE

Hired

- FTEs: 4 (3 HQ, 1 Ohio)
- PTEs/temps/interns: 0
- Contractors: 0

Turnover

- FTEs: 7 (5 HQ, 2 Ohio)

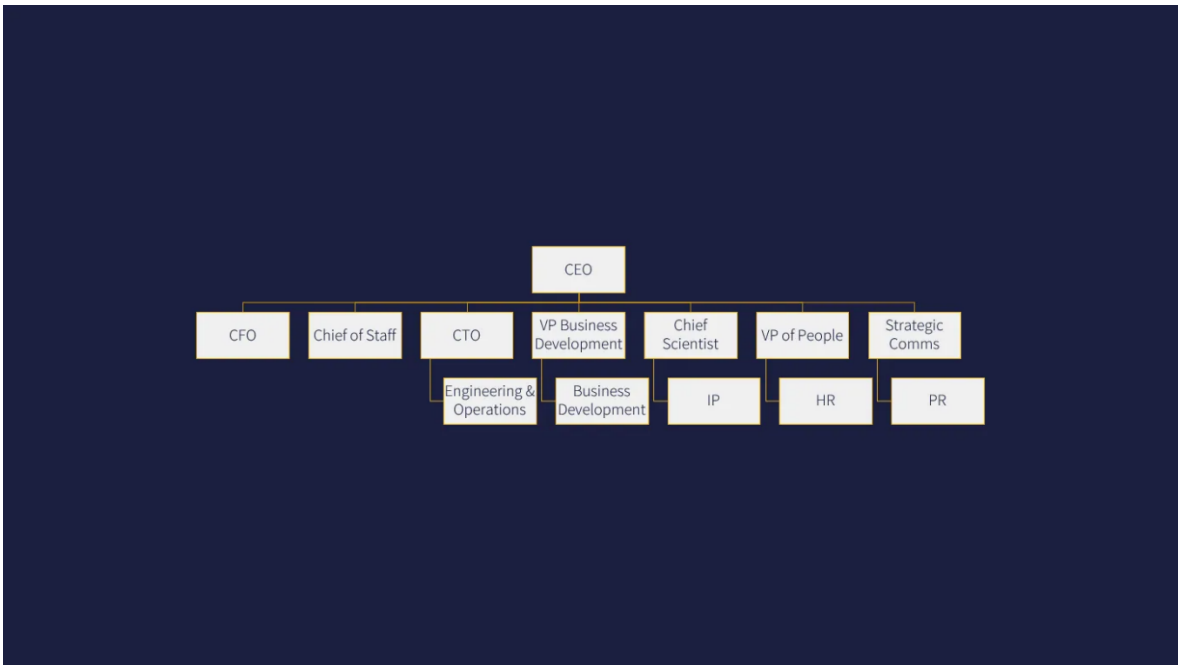
[2] Member-level meeting

CONFIDENTIAL

- Voluntary: 5 HQ, 0 Ohio
- Involuntary: 0 HQ, 2 Ohio

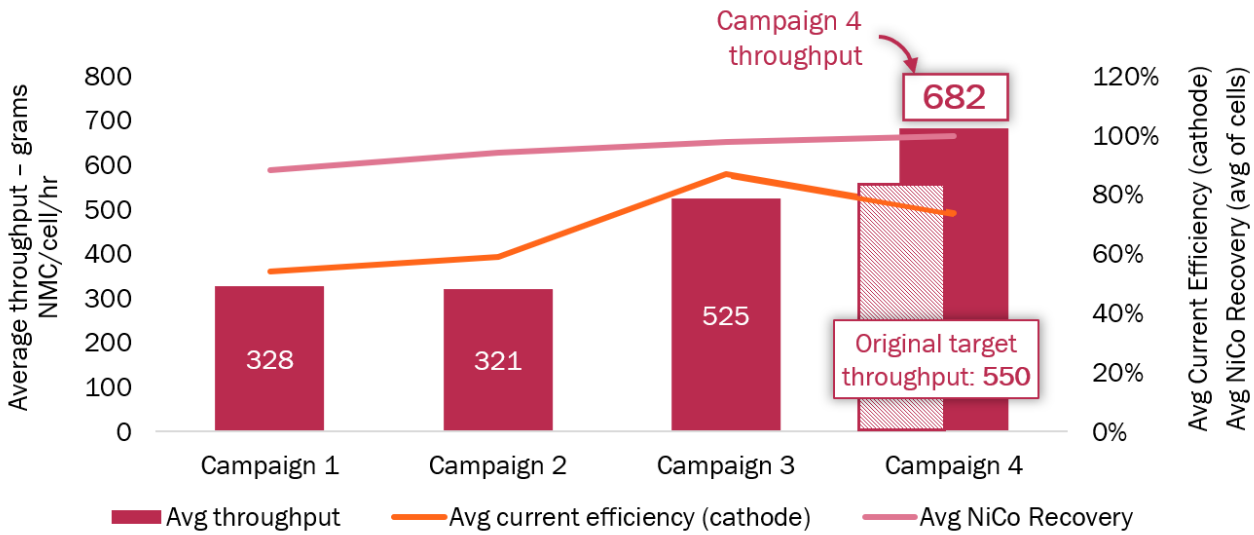
Totals

- FTEs: 42 (34 HQ, 8 Ohio)
- PTEs/temps/interns: 1 (1 HQ, 0 Ohio)
- Contractors: 3



III. OHIO UPDATE, CELL DEVELOPMENT, & PLANT ENGINEERING

CELL AND SYSTEM VALIDATION AND PERFORMANCE



CONFIDENTIAL

In Q4, we advanced key engineering partnerships with Fluor and Rockwell Automation to support the next phase of growth.

- **Completed 12 months of operations in Ohio**, validating the core technology over more than 3,000 hours and identifying key optimizations for commercial plants.
- **Fluor**, a global engineering and construction firm, completed a fatal flaw analysis that validated our updated flowsheet, confirmed capital cost estimates various plants size, and delivered corresponding plot plans for the next US and EU facilities.
- **Rockwell Automation**, a leader in industrial control and digital systems, completed a data assessment to right-size our automation needs and began outlining future control systems and digital twin models to optimize plant design and operations.

TESLA CAMPAIGN

At the end of Q4, we successfully processed two super sacks of Tesla's black mass in Ohio. The campaign achieved performance objectives (see tables below), and results have been shared back with Tesla. Notably, we achieved NMC hydroxide product purity >98.5%.

Following this outcome, we re-engaged with Tesla to accelerate commercial discussions regarding a potential tolling site funded by the US Government.

Process	NiCo Recovery
Pre-processing (Dissolution)	93.2%
Core Tech	99.9%
Overall	92.7%

Table 1: Nth Cycle process and system nickel-cobalt recovery performance

Average Nth Cycle NiCo-OH composition (% w/w) produced from Tesla black mass								
% w/w	Ni	Co	Mn	Li	Al	Cu	Fe	Na
% (dry basis)	55.2%	3.33%	1.33%	<MDL	0.4%	0.03%	0.01%	0.31%
% (metals)	90.9%	5.48%	2.19%	<MDL	0.66%	0.25%	0.02	0.49%

Table 2: Average Nth Cycle NiCo-OH composition (% w/w) produced from Tesla black mass. Ca, Cd, Cr, K, Mg, Pb, Se, and Zn were all below the minimum detection limit.

IV. BUSINESS DEVELOPMENT PIPELINE

ANCHOR PLANT DEVELOPMENT

In Q4 we confirmed our strategy to develop two anchor black mass facilities (one is the U.S., and one in the EU). The plants will be the same capacity (6,000 tpy of black mass input)and flowsheet, allowing us to

develop both projects simultaneously given our ability to leverage the same pre-engineering work for both projects.

BLACK MASS ANCHOR PLANT FEEDSTOCK & OFFTAKE

OFFTAKE					
	Location		Nth Cycle Product		
Company	US Plant	NL Plant	MHP	Lithium Carbonate	Status
Westwin	Yes	No	Yes	No	Awaiting execution
Vale	Yes	No	Yes	No	Trial/ Term Sheet discussions
Traxys	Yes	Yes	Yes	Yes	Term sheet negotiation
Trafigura	Yes	Yes	Yes	Yes	Term sheet development
EcoPro	Yes	Yes	Yes	TBD	Trial discussions
Korea Zinc	Yes	Yes	Yes	TBD	Initial discussions
POSCO	Yes	Yes	Yes	TBD	Initial discussions
Glencore/Agmet	Yes	Yes	Yes	No	Initial discussions

SUPPLY					
	Location		Nth Cycle Product		
Company	US Plant	NL Plant	Black Mass	Nickel Catalyst	Status

Cirba	Yes	No	Yes	No	Term sheet development
Glencore/Agmet	Yes	No	No	Yes	Initial discussions

RARE EARTH AND COPPER PIPELINE OPPORTUNITIES

Rare Earth Pipeline

We significantly grew our rare earth pipeline in Q4.

Active Discussions Rare Earth Engagements	
Company	**Status**
Omnisource	Samples received, scheduling testing
ERI	Awaiting samples
MP Materials	Awaiting samples

Active Discussions Rare Earth Engagements	
Company	**Status**
Rare Earth Technologies	Awaiting samples
HyProMag / Mkango	Awaiting samples
Momentum Technologies	Awaiting feedback on value prop
Alta Resource Technologies	Ongoing discussion about partnership opportunity
Ionic Technologies	Testing samples and JDA discussion
ReElement Technologies	Ongoing discussion about partnership opportunity
Iondrive	No immediate opportunity; re-engaging
Solvay	No immediate opportunity; re-engaging
EF – Energy Fuels	No engagement to date; intro scheduled from USG

Copper Pipeline

We're continuing to engage with **Rio Tinto** and **USSM** as we're expanding our copper pipeline.

V. PERFORMANCE

IMPACT

Scope 1 emissions (t CO2e): Not yet measured
Scope 2 emission (t CO2e): Not yet measured
Scope 3 emission (t CO2e): Not yet measured
Tons of MHP produced: 80.8 tons at 86.4% moisture content (total for Jan 2025 to Dec 2025)

HEALTH & SAFETY

- Equipment Near Misses: 0
- Spark/Fire Risk: 1
- First Aid: 0
- Spills/Release/Exposure: 2
- Recordable Injury: 0
-
