XGS Energy

Clean, Low Cost, Round-the-Clock Energy, Everywhere, Forever.

Growth Round Summary Materials

Q4 2025

XGS Energy Investment Highlights

Team: **Proven, best-in-class team** combines 10+ GW of power development & financing experience with leading capabilities in resource evaluation, technology and engineering services

Technology: Proprietary clean, firm, financeable geothermal power generation technology, **proven with 3000+ hrs operating history at commercial-scale**

Market Demand: **$3B contracted cashflows for 180+ MW with hyperscalers (Meta) and utilities,** 3+ GW of immediately addressable pipeline, and $200T total development opportunity for 40+ TW of hot-rock potential

Competitive Advantage: **No operating water use, no fracking, no geological or geographical limitations,** altogether designed for low-risk development and operations and market-leading time-to-power

Financial: Services revenue model delivers massive EBITDA and **near-term, high-multiple monetization** while retaining long-term project development upside

The Geothermal Industry Has a Water and Geology Problem

Historical challenges to geothermal scale

Hard to Find

Existing geothermal tech requires:

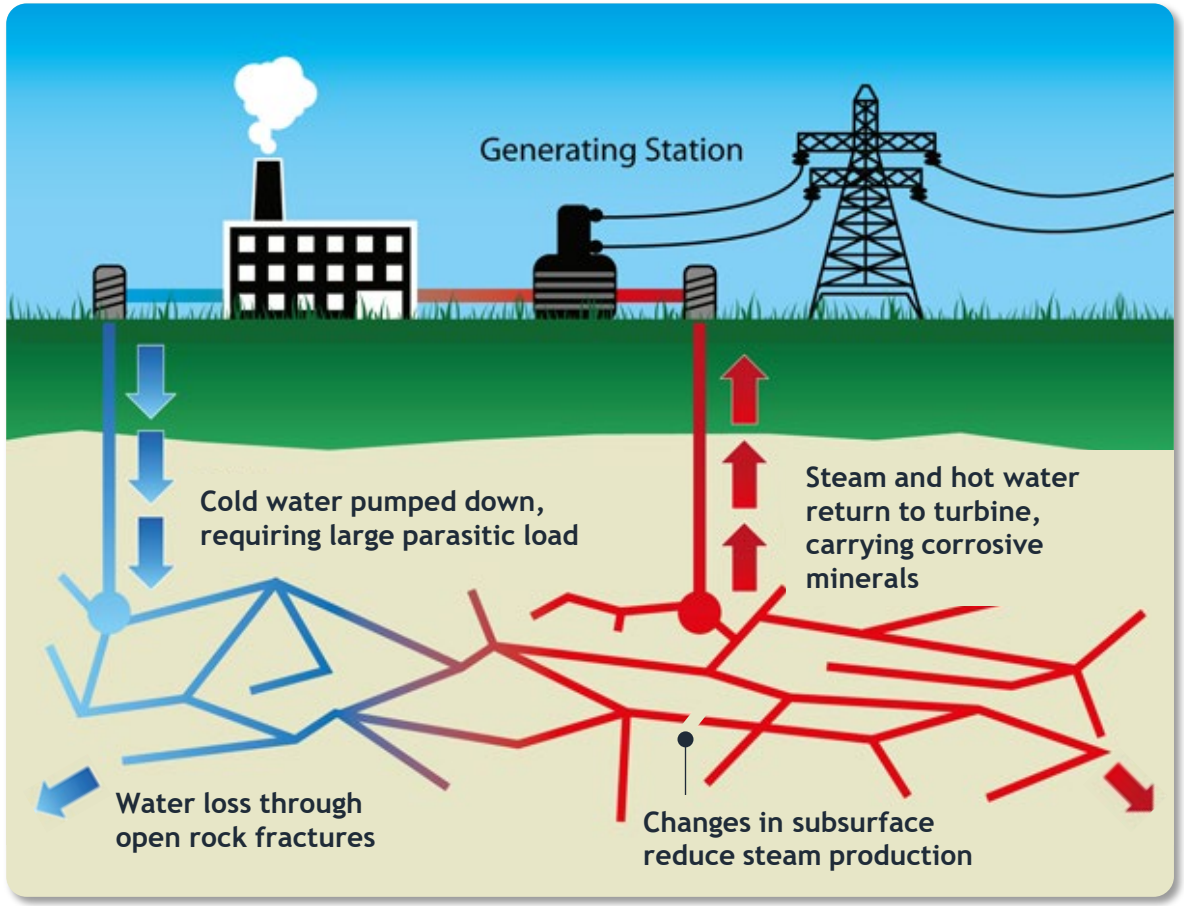
- Hot rock
- Right geology
- Abundant water

Hard to Finance

Operational challenges include:

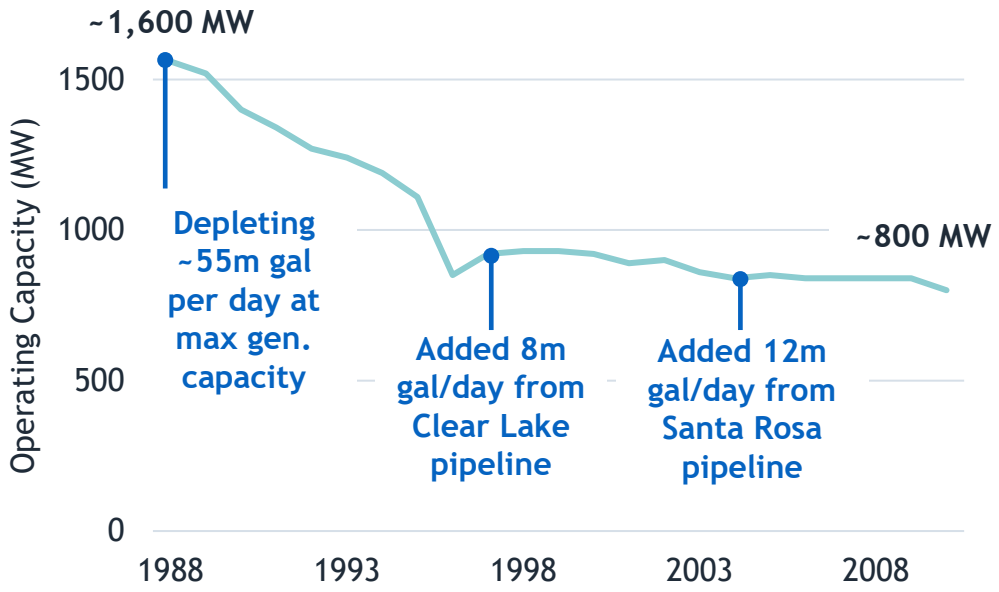
- Subsurface integrity
- Water losses
- Corrosion and scaling

Conventional Geothermal Plant



Geothermal's Historical Water and Power Degradation Problem

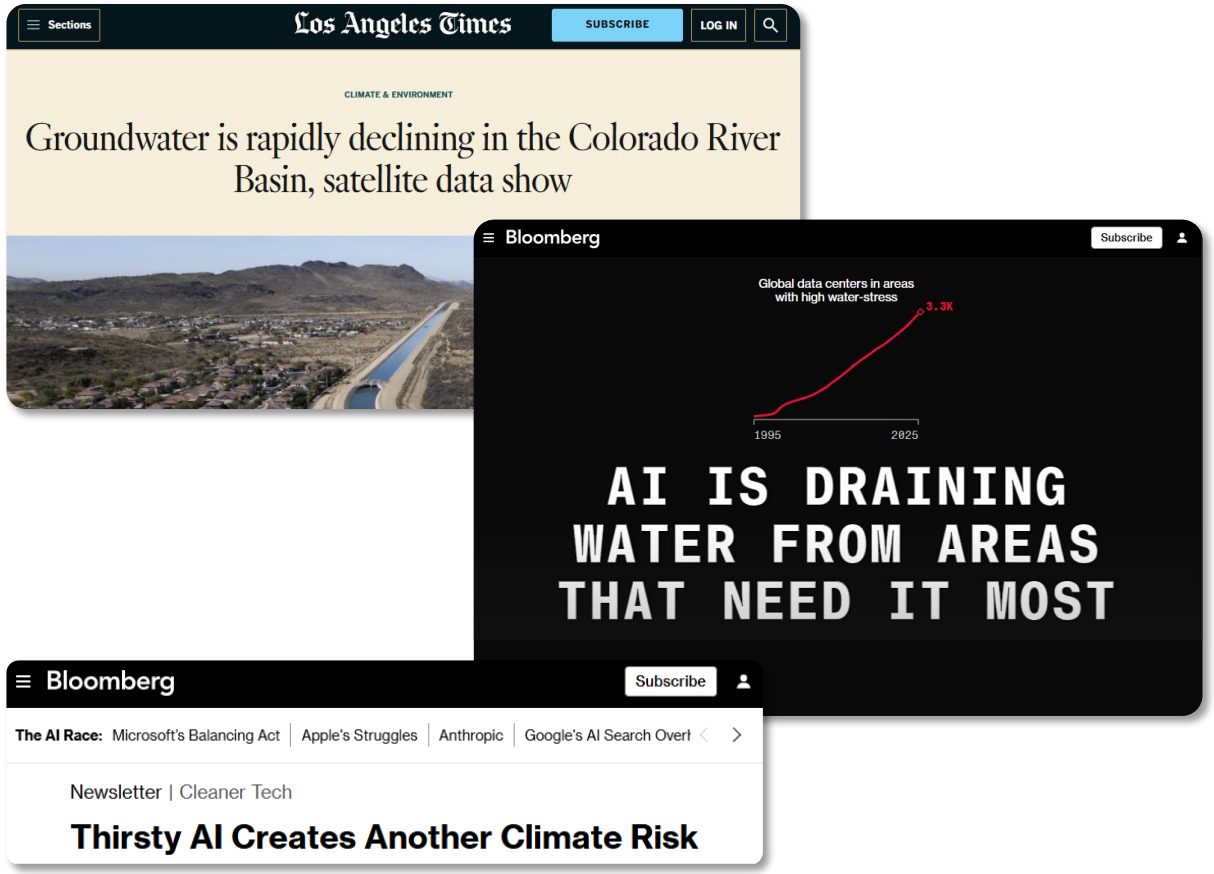
The Geysers Power Degradation and Water Injection



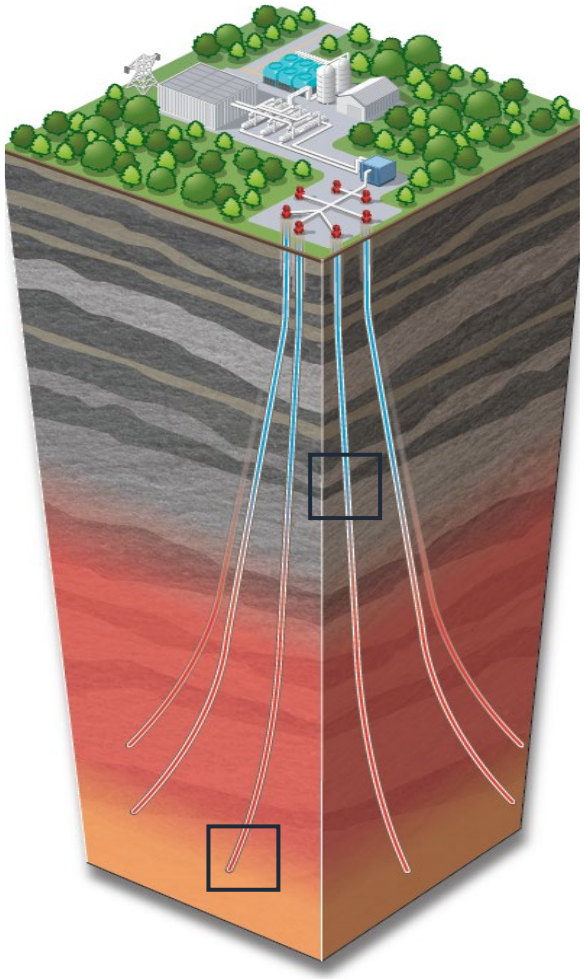
Requires the injection of **20 million gallons of water per day** to minimize degradation inherent to geothermal systems that rely on subsurface fracture networks

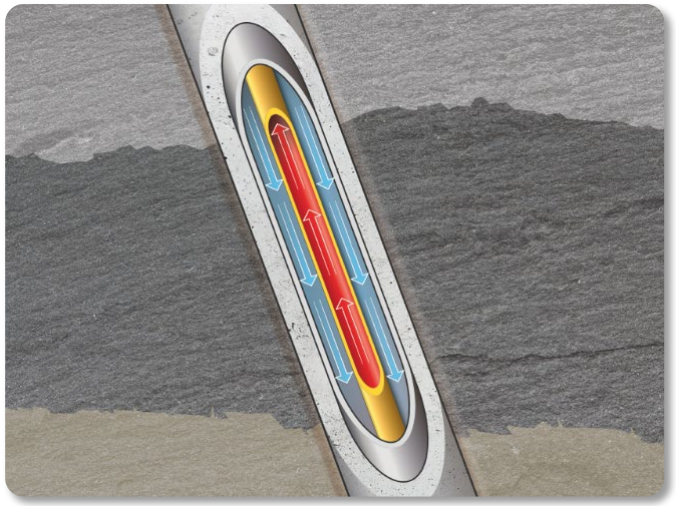
Source: Sanyal, S.K. and Enedy, K.L. (2011). *Fifty Years of Power Generation at The Geysers Geothermal Field, California - The Lessons Learned.*

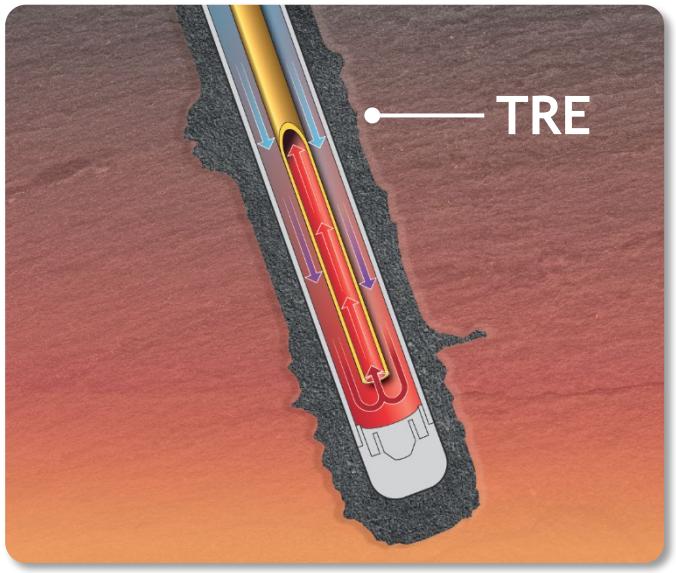
XGS eliminates degradation from water depletion, while conserving an increasingly critical resource



XGS Requires No Water, No Fracking, and Has No Geological Limitations







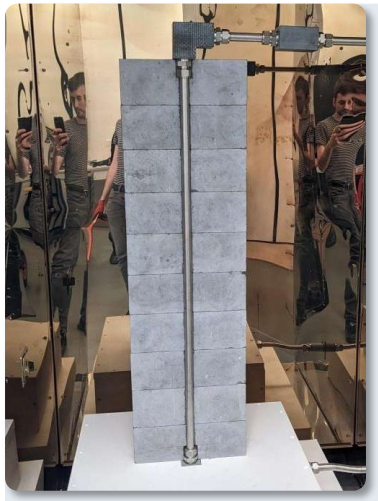
XGS's closed-loop system is both water and geology independent, allowing it to be deployed anywhere in the world

How it works:

- Modular: Base component is a single standard well, drilled using cost-effective, proven oil and gas tools & procedures
- Enhanced: Advanced thermally conductive materials are "squeezed" behind the steel casing and into hot rock around the well
- Water independent: Water circulates within tube-in-tube closed-loop system, only touching the steel casing, eliminating water loss
- Geology independent: Only requirement is hot rock; closed-loop design eliminates geology requirements (e.g., permeability, porosity)
- Efficient: Design requires <5% parasitic load

Proprietary design of Thermal Reach Enhancement (TRE) enables 30-50% more heat capture from hot rock

Technology Validated Through Rigorous Testing



Laboratory Testing

2023

Optimized thermal conductivity, viscosity, and pumpability of TRE under subsurface conditions through extensive lab-scale testing

Designed TRE slurry compositions with thermal conductivity >10X that of native rock

Shallow-Well Demonstration

2024

Successfully mixed, pumped, and placed TRE using off-the-shelf commercial cementing equipment

Exceeded target TRE heat-transfer rate by 10% over lab-scale test, demonstrating commercial readiness of overall system

Commercial Demonstration

2024 - 2025

Commissioned full subsurface and surface systems including TRE at commercial scale (>1-km, 200C+)

Collected 3000+ operating hours validating predictive heat extraction models and lifetime commercial viability

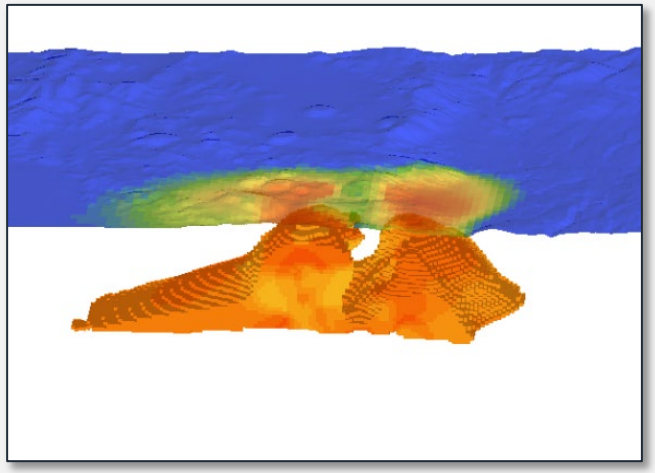
More details on next slide

Backed by 30 Awarded Patents and 45+ Pending Patents Globally

Proven Operations At Commercial Scale

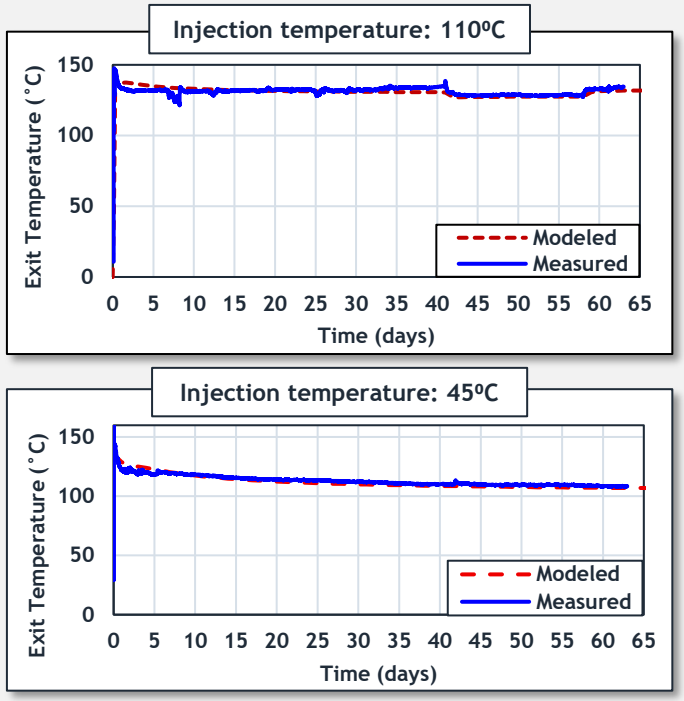
1-km high-temperature well in operating geothermal field in California

1 Proven Resource Evaluation



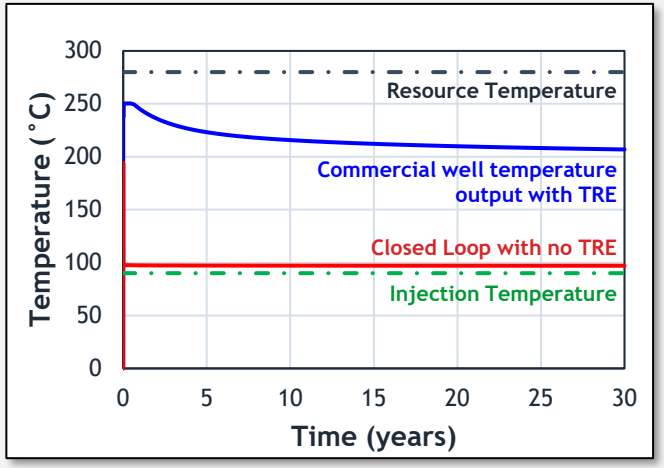
2.5+ GWe of geothermal potential identified in prototype field with proprietary resource model

2 Proven Predictive Model



Temperature measurements fall **within <1% of projected heat output** from predictive models

3 Proven TRE Performance



TRE enables **>10x greater lifetime thermal energy recovery** compared to a system without TRE

XGS's 40 TW, $200T Geothermal Power Market

XGS' Markets

500 MW
Repowering idle or abandoned brownfield wells

50,000 MW
Redeveloping and expanding existing geothermal areas

40,000,000 MW
Greenfield potential from dry, hot rock

Next-gen Power Market

500 MW
2030-2032

Proprietary Resource Evaluation Accelerates Access to $200T Market

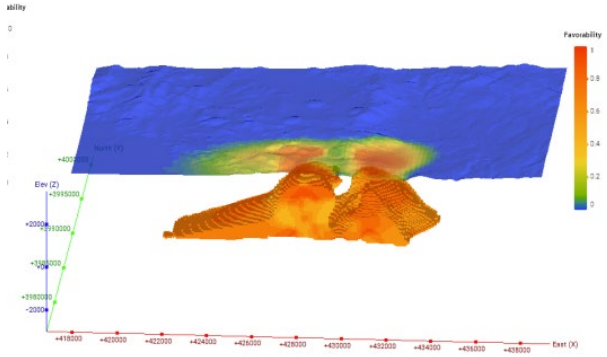
XGS technology enables energy production from previously unaddressable geothermal heat resources, requiring unique field evaluations to identify and quantify energy capacity

Ongoing proprietary modeling has identified 3+ GW new Possible/Probable resource across priority locations

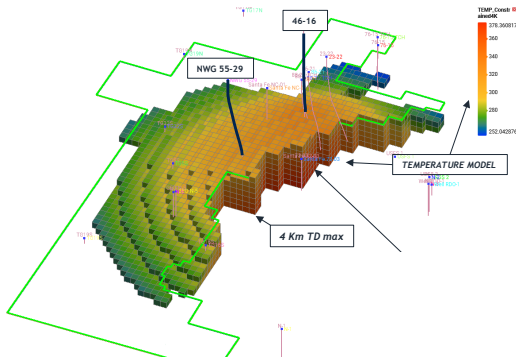
Subsurface characterization and resource evaluation builds long-term project pipeline value for XGS

Selected resource models

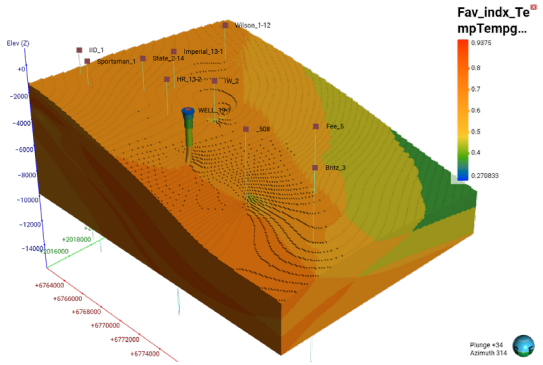
Project G - California



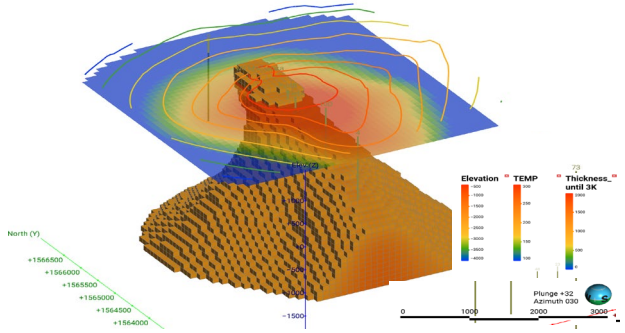
Project K - US PacNW



Project Q - California



Project A - Philippines



XGS Advantages Over SMR, Gas and other Geothermal

XGS is the **leading** technology that can **rapidly deliver clean, baseload power anywhere** there is hot rock, while **minimizing water** use and ensuring **long-term reliability**

	XGS Energy	SMR	Gas-Fired Generation	Other Geothermal
Time-to-power *Low development and operational risk*	✓	✗	~	~
Water requirements	✓	~	✗	✗
Financeability *Validated, reliable operations*	✓	~	✓	✗
TAM *Geographic flexibility*	✓	✓	✓	✗
Carbon intensity	✓	✓	✗	~

Capital Formation Designed for Near-Term, High Multiple Monetization at TechCo, Retained Upside in DevCo

TopCo / TechCo

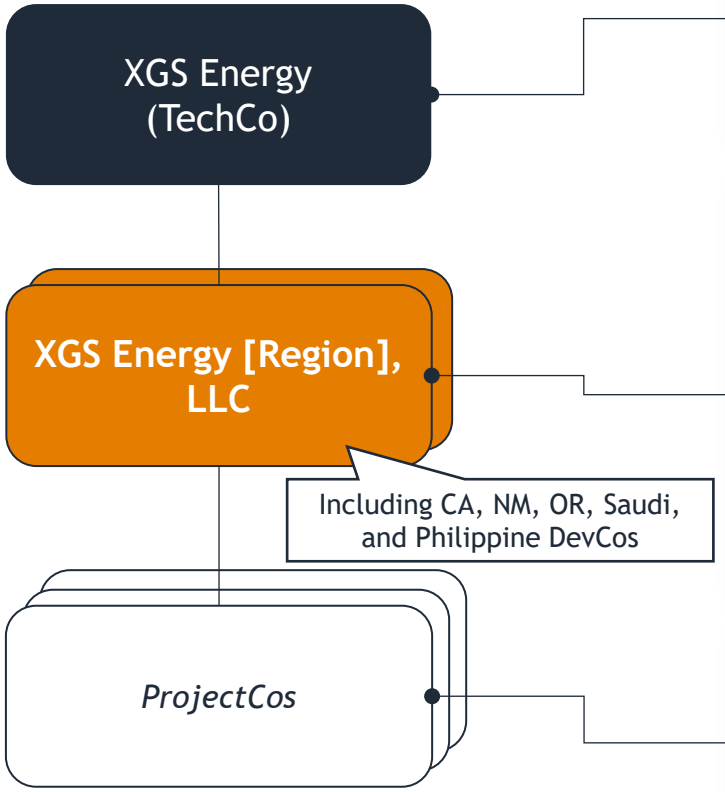
Owns proprietary technology and invests in continued margin expansion research

Market-Focused DevCo

Develops & owns pipeline of projects in each region

Project SPVs

Individual geothermal generation projects



Project details to follow

TechCo: Differentiated Tech Enables Baseload at Scale

- Provides proprietary and exclusive resource, engineering, procurement, and construction services to DevCo
- Contributes to existing development assets

DevCo: Raising Development & Project Equity

- Unlocks key next steps for regional projects in **resource evaluation, site control, permitting, interconnection**, as well as selective **data center powered land & powered shell development**
- **Progresses engineering and long lead time procurement** to accelerate project execution through construction
- **Contributes balance of project equity** into initial projects at FID

ProjectCo SPV

- Vehicle for tax equity funding and for larger scale non-recourse debt towards construction and commissioning

Confidential

$35M Growth Round Enables GW-Scale Project Development

$35mm TopCo Use of Funds

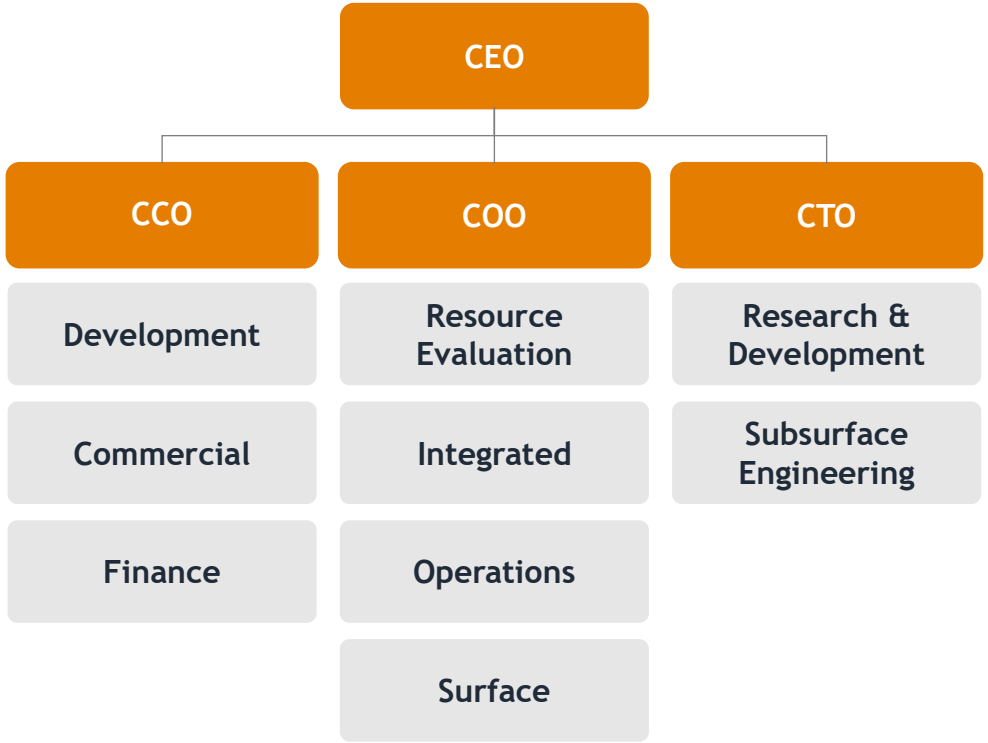
Organizational depth to execute immediate projects

Operational, engineering, & technology improvements to increase margins, accelerate TAM

Increase proprietary resource evaluation capacity to drive project development

Early-stage project development to accelerate and scale pipeline

Functional Organization



Proven Leadership

Josh Prueher

President & CEO

B.S., U.S. Naval Academy; M.B.A., U. Oxford

- Founder, CEO & CFO of 3 energy technology & infrastructure companies incl. FlexGen, Broad Reach Power
- Experience deploying over $900mm in infrastructure capital and developing 4+ GW of clean power projects

Ghazal Izadi

Chief Operating Officer

Ph.D. Reservoir Engineering, Penn State

- Global Lead in Reservoir Technical Services at Baker Hughes
- Managed team of 200+, overseeing technical operations for 100+ projects across 20 geothermal fields spanning 5 continents

Axel-Pierre Bois, Ph.D.

Chief Technology Officer

Ph.D. Geomechanics, U. Sherbrooke

- Founder and CEO of CURISTEC technical consultancy for oil & gas and geothermal industries
- Coauthored more than 60 technical papers and holds 10+ patents for novel well completion technologies

Lucy Darago

Chief Commercial Officer

Ph.D. Chemistry, UC Berkeley

- Principal at Boston Consulting Group (BCG), strategic advisor to F500 energy, public sector
- Designed and implemented clean energy procurement strategies for multiple 10+ TWh/year energy consumers

XGS Team Experience

HALLIBURTON, ExxonMobil, Shell, PINEGATE RENEWABLES, FLEXGEN, CURISTEC, slb, Baker Hughes, bp, HESS, NOV, nobel energy, EARL ENERGY, BCG, BROAD REACH POWER

World-Class Board and Execution Partners

Board of Directors

Craig Barrett, Ph.D.

Chairman of the Board
Former Chairman & CEO, Intel

Piotr D. Moncarz, Ph.D.

Founder & Vice Chairman
Adjunct Professor, Stanford
Former Senior Fellow & Principal Engineer at Exponent Inc.

Martin S. Craighead

Board Director
Former Chairman & CEO, Baker Hughes; Board Director at Emerson Electric and Texas Instruments

Ray Mabus

Board Director
Former US Sec. of the Navy
Former US Amb. to Saudi Arabia
Former US state Governor

Mano Nazar

Board Director
ClearSky Senior Advisor, Former Chief Nuclear Officer of NextEra

Josh Prueher

President and CEO
Founder, CEO and CFO of 3 energy technology companies incl. FlexGen, Broad Reach Power

David Seldin

Board Director
Co-founder and Managing Partner, Anzu Partners
35+ years in private equity

Khalid Alsweilem

Board Director
Former Chief Invest. Officer, Chief Counselor, and Dir. Gen. of Invest. at Saudi Arabian Monetary Agency (SAMA)

Glen Robinson

Board Director
Vice President, Constellation
30+ years in power industry finance, strategy, and operations

Joe Goodman, Ph.D.

Board Director
Co-founder and Managing Partner, VoLo Earth Ventures

Partners & Investors

Meta · Constellation · VoLo Earth · NorthStar Clean Energy · Aligned Climate Capital · Thin Line Capital · Climate Innovation Capital · HP · Anzu Partners · VALO ventures · ClearSky · WovenEarth
